Numpy & Matplotlib

1. Use Numpy to generate sin and cos data [x range is from 0 to 4pi with step 0.1]

```
x = np.arange(0, pi*np.pi, 0.1) # start, stop, step
y_sin = ?
y_cos = ?
```

2. Use generated data to plot figure by Matplotlib

Example outputs

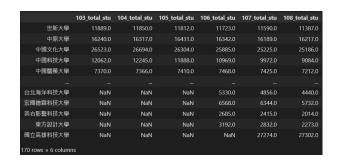

Pandas

We can obtain the data sets 大專院校校別學生數 (103-108 academic year) from the 政府開放資料 (https://data.gov.tw/). Making a table to show the total number of students in different universities per academic year.

Notes:

- Data Source: https://data.gov.tw/dataset/6231
- Academic years: 103, 104, 105, 106, 107 and 108
- Universites: 國立臺灣大學, 國立清華大學, 國立中央大學, 國立成功大學, 國立交通大學,
